Education

Pune Institute of Computer Technology — Sep. 2023 – Present
B.E. in Electronics and Telecommunication - CGPA - 9.143 — *Pune, Maharashtra*

HPT Arts and RYK Science college, Nashik — June 2021 – Feb 2023
HSC - Percentage – 75.67 % — *Nashik, Maharashtra*

Experience

Pune Institute of Computer Technology — Jan 2026 - April 2026
Full Stack Developer Intern — *Pune, Maharashtra*

- Developed GearGuard, a full-stack maintenance management web application using React.js, Node.js, Express.js, and MySQL to **streamline equipment tracking and work order management**
- Created responsive frontend with React.js, Tailwind CSS, and React Router, implementing CRUD operations, search/filter functionality, and data export features
- Built **RESTful API** with 20+ endpoints featuring **JWT authentication**, role-based access control (Admin, Technician, Employee), and secure password hashing using bcrypt
- Technologies: React.js, Node.js, Express.js, MySQL, Sequelize ORM, JWT, Tailwind CSS, Vite, Git, Postman, VS Code

Projects

Amicus- Legal Text Analyzer | *Python, FastAPI, React, Hugging Face, MongoDB*

- Built a full-stack **AI legal document analysis platform** that extracts text from PDFs and generates structured summaries tailored to document type.
- Designed a **document-type classification layer** routing bills and contracts to separate summarization pipelines, and fixed a routing bug causing incorrect cross-domain summaries.
- **Fine-tuned BART/PEGASUS** on the BillSum dataset for legislative summarization, and built **CUAD-based clause extraction** and **NER** for parties, dates, and financial terms in contracts.
- Built **REST APIs** integrating PDF extraction, NLP preprocessing, and model inference, with user auth and summary history.

InsideHQ – RAG Employee Knowledge Assistant | *Python, FastAPI, React, RAG, PostgreSQL+ pgvector*

- **Built a permission-aware RAG assistant** that answers employee questions from company documents, with access control enforced directly in the database query so a user's role/department decides which documents are even searched, not just what's shown afterward.
- **Combined keyword search and vector (semantic) search** using PostgreSQL full-text search and pgvector, merged with Reciprocal Rank Fusion, and added a reranking step using open-source embedding and reranker models (BAAI/bge models)
- **Added basic evaluation and monitoring:** a small test set scored with RAGAS for answer accuracy, a set of permission tests to check restricted documents never leak to the wrong user, and Langfuse logging to trace what each request retrieved and generated.

Technical Skills

- **Programming Languages:** C | C++ | Python | HTML | CSS | JavaScript
- **Technologies/Frameworks:** React.js | NodeJS | ExpressJS | FastAPI
- **Developer Tools:** VS Code | Git | Github
- **Databases:** PostgreSQL | pgvector | MongoDB | MySQL
- **Relevant Coursework:** Data Structures and Algorithms | Object Oriented Programming | Operating Systems | DBMS

Extra-Curricular Activities & Achievements

- Led 50+ team members as Impetus Event Head for InC 2026 (1500+ footfall)
- Solved 500+ coding problems across Leetcode, GFG and CodeChef
